

NOR'EASTER COLLECTOR

INroof.solar panels are pre-plumbed, pre-insulated, standing seam, aluminum roofing panels that serve as **both solar thermal collectors and the roof itself**. This patent-pending integrated design allows our high-efficiency technology to function completely out of view, giving you all the benefits of solar thermal energy hidden neatly beneath standing seam metal roofing.

INroof.solar panels are available in a range of sizes and colors to realize your design objectives. Typically, the length of panels will be dictated by the roof design while the width is a matter of aesthetic preference. All panels are available in either 16-17" or 20-21" width and with either 1" or 1.5" standing seam height. Sizes are available in any of the 43 colors available, which can be found on our SRCC certification.

Panel Length

The panel length depends on the length of the roof and can be customized further.

Plumbed & Insulated

Plumbed panels will act as solar thermal collectors. The number of plumbed panels depends on your average heating load.

Insulated

Insulated panels allow for continuity within a project and reduce a structure's overall heating and cooling loads.

4'	6'	8'	10'	12'	14'	16'	18'	20'	22'	24'	26'	28'	30'
\$162	\$201	\$241	\$281	\$320	\$360	\$400	\$440	\$479	\$519	\$559	\$598	\$638	\$678
\$37	\$56	\$74	\$92	\$111	\$129	\$148	\$166	\$184	\$203	\$221	\$240	\$258	\$276

Please note that prices listed here are the **cost per panel for given sizes and features and **do not include any incentives**. These prices do not include engineering services, installation services, or system components such as sensors, tanks, pumps or PV film. Specialty roof design will incur additional charges. While prices are current upon publication (8/18), they are subject to change.*
